

## Instant Install Product Bulletin

Each Injector Tee correctly positioned at the right location on the string.

Tubing is properly sized to get around the intercell connectors.

Injectors swivel in place and adapt to the application

Tubing properly sized to not interfere with battery cables.

All end fittings attached

***Do you find single point watering systems difficult or confusing to install?***

***Do you have a lot of batteries that you want to install single point watering systems onto quickly?***

***Would you like to see your installations done with the same consistency and precision every time?***

This month's Product Bulletin features our Instant Install program for Water Injector™ Strings. Instant Install Injector Systems come pre-assembled right out of the package to fit on the battery it will be used on. We accurately punch the holes and position the Injectors in our factory so you don't have to.

The Philadelphia Scientific Water Injector System Selection Guide contains our recommended layouts for the most common battery types:

- Whether you have a 12-cell, 13-plate battery for a Pallet Jack or a Stock Picker or an 18-Cell, 17-plate for a Sit Down Lift or a Stand-Up Double Reach Truck we have already designed the correct layout to fit the application.
- You simply select the layout that you need and order it by number.
- Should you have a battery that does not appear in our Battery Selection Guide we will design an Instant Install layout for your application.
- You can also find our Water Injector System Selection Guide at [www.phlsci.com](http://www.phlsci.com).

## Instant Install Product Bulletin

### If you come across a battery that is not in our Selection Guide:

Simply supply us with the battery model and the approximate tray dimensions (length and width) and we will develop a layout specifically for your application.

**No Marking**

**No Punching**

Many of the Most Popular Instant Install Layouts are In-Stock

All Orders Received by 11:00 am E.S.T. are Shipped the Same Day

Instant Install Water Injector™ Systems are ideal for:

- Installations with multiple batteries of the same type or varied battery types and sizes.
- Demanding or hard to fit applications.
- When deadlines are tight.

### Select the Right Water Supply for your Application

#### **HYDRO CART**

A/C Powered.  
Robust & Mobile,  
Top-of-the Line Model.  
Ideal when In-house water is not pure enough for battery use and a Deionizer is required.

#### **Mobile Bladder Tank**

No A/C Power required.  
Ideal for when batteries are too far from water mains.

#### **Direct Fill**

Off-the-shelf water supply.  
Attaches directly to customer's water mains.  
Must have sufficient in-house water pressures to use.

**In our next issue we review water supplies**
